TowsifKhan.com — Master Fact Record

Complete Personal Story, Entrepreneurial Journey, Portfolio, and Website Vision

Purpose of this document: This is the master source of truth for building TowsifKhan.com. It contains my personal story, education, entrepreneurial journey, business ventures, skills, client work, technology projects, future plans, and website requirements. The website should be built from this information rather than inventing achievements, exaggerating my success, or presenting me as someone who has already figured everything out.

The writing should be personal, honest, ambitious, and story-driven. It should explain not only what I have done, but also why I started, what I experienced, what failed, what I learned, and what I want to build next.

1. Who I Am

My name is Towsif Ahmmed Khan, and professionally I use the name Towsif Khan.

The primary professional identity I want people to associate with me is Creative Strategist. I am also an entrepreneur, creative director, and technology enthusiast who is learning by building.

My journey brings together creativity, business, technology, and personal development. I have worked in graphic design, video editing, motion graphics, brand development, creative direction, content strategy, web development, business development, and digital growth. Along the way, I have started businesses, worked with clients, managed creative teams, experimented with software, explored new business opportunities, and experienced both progress and setbacks.

I do not want my website to portray me as a perfect entrepreneur who has already achieved everything. I want it to show the real journey of someone who started learning at a young age, gradually developed professional skills, took risks, built businesses, made mistakes, and continues to grow.

My long-term ambition is to build a unicorn company. That is a future goal, not an achievement I am claiming today.

I want visitors to remember me as someone who combines creativity, technology, and business to build meaningful things. I want my story to inspire people, especially young freelancers, creators, and aspiring entrepreneurs, by showing them that a meaningful journey can begin long before someone has everything figured out.

2. My Childhood, Family, and Early Ambitions

I was born on 30 September 2004 in Chattogram, Bangladesh. I grew up in a middle-class household with a supportive family.

My family has supported me throughout my life, but I have always wanted to establish my own identity through my work, decisions, and accomplishments rather than rely on family resources.

When I was younger, my parents initially allowed me to use a laptop for only around 30 minutes a day. As I began demonstrating that I was serious about learning, working, and building something for myself, their trust and support gradually increased.

One of the most important people in my early journey was my brother, Fahim. From the very beginning, he supported me the most as I started learning, exploring opportunities, and trying to build my future. His support is an important part of my personal story and should not be omitted from the website. Do not invent specific actions or events involving him beyond what I have shared.

My childhood ambitions changed over time. Initially, I dreamed of becoming a pilot. Later, I became fascinated by augmented reality and virtual reality and started imagining a future in which I would build an IT company.

I also played cricket and had an opportunity to consider pursuing it further. However, I decided to focus on work because I believed it offered a more stable future for me.

Over time, my ambitions expanded. I moved from wanting to learn skills and earn money independently to wanting to build businesses, create useful products, develop technology, and eventually build something with a much larger impact.

My story is not about starting with perfect resources or knowing exactly what I wanted to become. It is about starting with what I had, learning as much as I could, and gradually taking on bigger challenges.

3. How My Freelancing Journey Began

Around 2016, when I was approximately 11 or 12 years old, I learned about freelancing.

Graphic design was the first skill I pursued seriously. I learned through YouTube tutorials, independent study, experimentation, and practice. I did not begin with an expensive course, a professional mentor, or a complete business plan. I learned by watching Youtube, trying, making mistakes, and improving.

During those early years, a Dell Core 2 Duo laptop became one of my most important tools. It was not the most powerful machine, but it gave me an opportunity to learn, practice, and start doing real work.

After completing my SSC, I faced a choice between buying a new gaming phone and prioritizing a computer for my work. I chose the computer. Soon afterward, I received substantial work and eventually bought a phone using money I had earned myself.

That experience strengthened my belief that investing in my skills and ability to work could create opportunities beyond what I could immediately afford.

I remember getting an early Upwork client and earning approximately ৳30,000, although I am not completely certain about the exact project or amount.

I also had a Fiverr client relationship that began with a small job of 5$ and eventually grew into a much larger working relationship.that was the only client i got from fiver.

Freelancing taught me that learning a skill is only the beginning. Finding clients, communicating professionally, understanding expectations, delivering work, handling feedback, and building trust are equally important.

I believe free educational resources can take someone a long way if they are willing to study consistently and practise what they learn. Watching hundreds of tutorials without applying the knowledge is not enough. Real improvement comes from building things, solving problems, receiving feedback, and repeatedly putting knowledge into practice.

These early experiences became the foundation for my later work in creative services, agency building, entrepreneurship, and technology.

4. A Difficult Lesson: The Cheque Incident

One experience from my freelancing journey taught me the importance of judgment and recognizing warning signs.

A client said they would send a cheque to a relative living in the United States so that the relative could deposit it. The client began pressuring my relative to collect and deposit the cheque.

Around that time, I happened to edit a project myself instead of delegating it to an editor as I usually did. in the video it raised serious concerns about the situation and this type of scams. I told my relative not to deposit the cheque, and it turned out they were very close to doing so.

The client continued applying pressure and making threats. Later on my cousin filed a complaint to the police. Till today My relative kept the cheque in case it was needed later.

I am comfortable sharing the lesson from this experience, but the website must not expose other people's identities or private identifying information.

The important point is that professional work requires more than technical skill. It also requires careful judgment, attention to warning signs, and the confidence to act when something does not feel right.

5. TSY EditX: My First Agency Experience

On 9 November 2020, I started TSY EditX, an early video-editing agency, with two of my good friends, Simi and Yeamin.

We were still new, but we received an opportunity to work with the large Facebook page Trololololo. It gave us experience handling work as a team rather than simply completing individual freelance projects. It paid 90k bdt/month initially which was a very big amount for us that time

The experience helped me understand the difference between being a skilled freelancer and trying to operate a business. A business requires coordination, communication, reliability, and people who can consistently dedicate time to the work.

Eventually, TSY EditX stopped functioning as a team because my friends prioritized their studies and could not dedicate enough time to the agency.

I also trained two editors and bought them good PC to edit and learn. who later left after a competitor offered them a higher rate. Around four months later, they wanted to return, but I chose not to restart the arrangement because my trust in the relationship had changed.

These experiences taught me that talent alone does not make a team successful. Commitment, shared expectations, reliability, and trust are equally important.

Mesbah Hasin was involved with TSY EditX as a manager beginning in 2020. His role in my journey continued later when he became my co-founder at ShortSwift Studio.

TSY EditX was an important early chapter in my development. It should be described as a venture where we eventually stopped working together, without claiming a formal legal closure unless that is separately confirmed.

6. ShortSwift Studio: Building a Creative Agency

I founded ShortSwift Studio on 14 January 2022.

It was a separate venture rather than simply a continuation of TSY EditX. By then, I had learned from freelancing and from the difficulties of trying to build a team. I wanted to create a more structured creative business that could grow beyond my own individual execution.

After an earlier setback, Mesbah Hasin played an especially important role in encouraging me to continue. He called me every day for 90 consecutive days, reminding me of my potential and encouraging me to return to building.

That persistence was meaningful to me. His support helped me regain the motivation to move forward and build something more sustainable.

Mesbah later became my co-founder at ShortSwift Studio.

As Founder and CEO, I focus on the business's overall direction, strategy, client acquisition, relationships, creative direction, growth, and identifying new opportunities. Mesbah primarily handles team management, hiring, and quality assurance.

Today, the team performs much of the day-to-day creative execution. This allows me to focus increasingly on strategy, business development, and the overall direction of the agency.

The services include - Video editing The origin , Website dev Added on 2023, Social media growth Added on 2024, Business growth Added on 2025, Brand development Added on 2025 , Brand visibility Added on 2025

ShortSwift Studio focuses primarily on brand development and brand growth. Our supporting services include video editing, motion graphics, web development, content strategy, and related digital services.

My philosophy is that creative work should serve a purpose. A design should not exist only to look attractive, and a video should not exist only to contain impressive effects. Creative work should communicate clearly, strengthen a brand, capture attention, improve audience retention, or contribute to a meaningful business objective.

I want ShortSwift Studio to become an internationally recognized creative and growth agency that combines brand development, video editing, web development, and digital strategy.

My international ambitions include working with businesses in the United States, the Middle East, and other markets.

The latest team size I provided was 12+ people, including the founders.

Bangladesh Navy

ShortSwift Studio has worked for the Bangladesh Navy.

The name Bangladesh Navy may be mentioned publicly as part of my professional experience. However, the specific projects, deliverables, and confidential details must remain private. The website must not reveal restricted materials or invent details about the work.

ShortSwift Studio website: https://shortswift-studios-web.vercel.app/

Brand portfolio: https://shortswift-studios-web.vercel.app/portfolio/brand

These websites may be used to identify work that is suitable for showcasing, subject to actual publication permissions.

7. Shikhte Chaw: An Educational Idea That Failed Before Launch

In early 2023, I began working on an educational concept called Shikhte Chaw, meaning “Do you want to learn?”

The idea came from a problem I had noticed and experienced myself. Students studying Bangladesh's national curriculum in English often struggled to find learning materials that matched their textbooks. There were resources for students following other educational systems, but finding suitable English-language explanations for the national curriculum could be difficult.

I wanted to create a platform that could help solve this problem.

The vision was broader than a single course. I imagined a platform that could provide learning resources, courses, tutoring, and other forms of educational support.

I developed the core idea and began working with partners. However, the project faced financing constraints and problems related to investment and partnerships.

Ultimately, Shikhte Chaw failed before launch. It never became a public platform with operating courses, customers, or a launched product.

This was a major personal setback. I had invested thought, ambition, and effort into an idea that I genuinely believed could help students.

But the experience taught me something important: a good idea is not enough.

A business also requires the right resources, suitable partners, aligned expectations, consistent execution, and the ability to keep moving forward after the initial excitement fades.

I do not want to hide this failure from my story. It is part of how I learned to think more carefully about business, execution, partnerships, and the difference between imagining something valuable and successfully building it.

8. Solexa: Building a Premium Sneaker Brand

I started Solexa in January 2025 as a premium sneaker brand for the Bangladeshi market.

The brand is built around the ambition of offering high-quality sneakers, with brands such as New Balance, Nike, and Puma etc serving as quality reference points. Solexa is my own venture and also partnered with Mesbah Hasin and Shoaib Akter and is not affiliated with those companies.

The business initially focused on business-to-consumer sales but has since moved primarily toward a business-to-business model. The main reason to switch from B2C to B2B is because customers want to wear the sneakers before they invest this big amount. And as we can't afford a showroom initially so we switched the business model.

My responsibilities include product sourcing, coordinating logistics from China to Bangladesh, and directing the brand's overall development.

Solexa performed better than I expected

My long-term ambition is to establish Solexa as a recognized premium sneaker brand in Bangladesh.

Solexa is an important part of my entrepreneurial story because it connects branding, product positioning, sourcing, logistics, and commercial decision-making.

It should be presented as a venture I am building, with a detailed case study where sufficient evidence and suitable visuals are available.

9. China Link BD: An Opportunity I Had to Leave Behind

On 24 May 2025, I started China Link BD, a venture intended to connect China and Bangladesh through trade.

Unlike Shikhte Chaw, which failed before launch, China Link BD reached actual commercial activity. I sourced and sold products and had customers or transactions involving cosmetics, electronics, clothing, and related categories.

The venture became inactive around July or August 2025.

The main reason was time. Giving China Link BD the attention it needed risked interfering with ShortSwift Studio, which was already an important part of my professional life.

I had to recognize that even a potentially valuable opportunity can become difficult to manage when I divide my attention across too many responsibilities.

This experience taught me that entrepreneurship is not simply about starting new things. It is also about choosing where to focus, understanding opportunity costs, and deciding which responsibilities deserve the most attention.

Not every venture needs to become a permanent business to contribute something valuable to my development.

10. My Education and Life in China

My formal education began in Bangladesh.

I attended Bangladesh Elementary School for my SSC/10th grade and Navy Anchorage School and College in Chattogram for my HSC/12th grade.

In March 2025, I began a six-month Chinese-language program at Chongqing Jiaotong University, where I studied up to HSK 2.

In September 2025, I began Bachelors in the same university. My expected graduation date is September 2029.

I chose China partly because I considered the cost of living manageable and viewed it as a technologically advanced environment in which to study.

Living and studying in China has given me a different perspective on technology, business, and the possibilities available to someone willing to keep learning.

this adds another dimension to my background. I already had experience with creative work, clients, business development, and entrepreneurship. I now want to deepen my understanding of the technology that can be used to create products, automate processes, and solve practical problems.

I am also working toward a research paper related to extended reality, or XR, with the goal of publishing before 2028. The paper is planned or in progress; it must not be described as published unless that actually happens. The specific research topic must remain private.

11. My Skills and Professional Approach

My three strongest professional areas are:

Brand development and creative direction. This includes brand identity, logos, typography, color systems, positioning, messaging, rebranding, visual direction, and digital presence.

Content strategy and digital growth. This includes content ideas, hooks, scripts, content planning, audience retention, social media strategy, client communication, outreach, positioning, and growth systems.

Video editing and motion graphics. My work can involve short-form and long-form content, hooks, pacing, storytelling, visual effects, sound design, transitions, audience retention, thumbnails, and visual packaging.

Beyond these areas, I have experience with web development, business development, client acquisition, creative team leadership, AI-assisted development, automation, product sourcing, cross-border logistics, and technology experimentation.

Tools and technologies I have used include Adobe Premiere Pro, Adobe After Effects, React, JavaScript, TypeScript, Tailwind CSS, Framer Motion, Lucide React, Node.js, HTML, CSS, Vercel, Hostinger, and cPanel.

The website should present these skills in context. It should not imply that I am equally advanced in every tool or that studying a technology is the same as having extensive professional engineering experience.

My approach to creative work is that the outcome must serve a purpose. I care about how a brand communicates, how content holds attention, how creative decisions support business goals, and how systems can help people work more effectively.

12. Technology Projects and Experiments

Technology is becoming an increasingly important part of my journey. I am exploring ways to turn ideas into useful software rather than limiting myself to using existing tools.

12.1 Lead Generation and Personalized Outreach Software

One of my important technology projects is a lead-generation and personalized-outreach system.

The intended workflow begins when a user specifies a niche. The software then finds potential leads, examines their branding or online presence for weaknesses, generates personalized outreach emails, sends messages automatically, follows up as many as six times, and attempts to book a meeting.

The goal is to make prospecting more targeted and systematic rather than relying entirely on manual research and generic messages.

Before the website describes it as a fully operational product, its actual deployment, data sources, integrations, reliability, safeguards, and booking results must be verified.

The website must not claim that the software has generated revenue or booked meetings unless evidence supports those claims.

12.2 ShortSwift Server Architect

ShortSwift Server Architect is a TypeScript project built around discord.js v14.

It is intended to automate the setup and administration of the ShortSwift Studio agency's Discord server, including categories, channels, roles, permissions, department areas, and role requests that require approval.

Configuration logic, role mapping, and automated tests have been worked on. Dependencies were installed, and type-checking and build steps were run.

12.3 ShortSwift Course Bot

ShortSwift Course Bot is a separate project from the agency Discord server. These two projects must never be confused.

The Course Bot is intended to support an educational community and course-management workflow. Its planned features include:

- Course-specific student roles.
- Unique access-code verification for enrolled students.
- Automatic role assignment when a submitted code matches an uploaded code.

- A test or application process before students can access the advanced video-editing course.
- Assessment submissions, reviews, results, and retakes.
- Support and refund request tickets.
- Course resources and assignments.
- English-practice resources and areas where students can practise with others.

These projects demonstrate my interest in combining software, automation, and practical workflows. They should be described accurately, with unfinished features clearly marked as in development.

I have not claimed to have launched a proprietary AI model or a commercially successful AI product.

13. A New Chapter: Building a Learning System for Dedicated Students

This is one of the most important parts of my current direction, and it must be clearly visible on the homepage of TowsifKhan.com.

I am working on courses and a student-learning initiative that I do not want to become just another course business.

I am not interested in collecting thousands of students simply to increase enrollment numbers. I would rather work with a small group of people who are genuinely dedicated to learning, improving their skills, implementing strategies, and growing.

My goal is to build a system in which students can follow my strategies, observe how I approach work and solve problems, learn from my experiences and experiments, and apply those lessons to their own goals.

I want students to do more than watch videos and collect course certificates. I want them to take action, practise what they learn, improve through experience, and work toward creating real opportunities for themselves.

An important part of this vision is that I do not want to be the only person who grows. I want the students who learn alongside me to grow with me.

As I develop businesses, test strategies, explore technology, build systems, and learn from my own experiences, I want to share useful lessons with people who are willing to put in the work.

I want them to see the thinking behind the strategies, not just the final results. I want to help them understand how to apply those strategies rather than blindly copy what I do.

The long-term vision is a practical learning environment in which students learn, implement, receive feedback where the system supports it, and continue improving. I want their progress to matter as much as the educational material itself.

I also want students to work toward earning through the skills and strategies they develop. However, the website must not promise guaranteed income or imply that everyone will earn a particular amount. The emphasis should be on learning, implementation, commitment, and creating opportunities through genuine effort.

The initiative is still being developed. Its final name, format, launch date, enrollment process, and exact structure have not yet been confirmed. The website must not invent these details or claim enrollment is open before a real enrollment process exists.

Homepage messaging for the learning initiative

The homepage should give this initiative its own prominent section rather than hiding it inside the About page or making it accessible only through the navigation.

A possible headline is:

“I don't want thousands of students. I want a few who are ready to grow.”

Possible supporting copy:

“I'm building a practical learning system for people who are serious about improving their skills and changing what they're capable of. I'll share the strategies, lessons, experiments, and experiences behind my work—not just tell you what to do, but help you understand how to apply it. The goal is to learn, take action, and grow together.”

This is proposed website copy, not a verbatim statement I previously published.

The section should communicate:

- Quality of commitment matters more than the number of students.
- Students should apply what they learn instead of passively consuming content.
- My strategies and experiences will help inform the learning process.
- The goal is mutual growth: I continue building, and students work toward their own development.
- Earning is an aspiration connected to developing and applying skills, not a guaranteed outcome.

A suitable call to action might be “Explore the Learning Initiative.” A waitlist or “Register Your Interest” button should be included only if the corresponding signup process exists.

14. Other Client Work and Portfolio

In addition to building my own ventures, I have worked on projects connected to several businesses and brands.

Some names I have identified include:

- Hengyuda International Trade Co., Ltd. - https://www.hengyudac211.com/
- Ayah Scents - https://ayah-scents.vercel.app/
- Shoaib Akter Portfolio - https://shoaib-akter.vercel.app/
- Brutal Carnage Family System - https://brutalcarnage.vercel.app/login

Hengyuda International Trade Co., Ltd. is a client company, not a business I own. My work involved website development and online presence.

I have also supplied the following project links:

- https://shoaib-akter.vercel.app/
- https://brutalcarnage.vercel.app/login

The precise relationship between each link, brand, and deliverable should be verified before the website creates a case study or attributes specific work to me.

My ShortSwift Studio website and brand portfolio are also potential sources of work samples. Available screenshots, videos, before-and-after comparisons, and testimonials can be used where publication is permitted.

I want my portfolio to demonstrate the breadth of my work, but it should not become a random gallery of disconnected images.

Each selected case study should explain the context, the problem, my actual role, the strategy, the execution, the outcome where verified, and what I learned.

If measurable results are unavailable or confidential, the website should explain the creative decisions and problem-solving process rather than invent numbers.

The portfolio can cover:

- Brand development and visual identity.
- Video editing and motion graphics.
- Web development.
- Technology and AI-related projects.
- Business ventures and case studies.
- Personal experiments and research.
- Content strategy and digital growth.

15. What Entrepreneurship Has Taught Me

My experiences have changed how I understand success, work, and responsibility.

Client communication helped me become more confident. I learned to take responsibility, leave my comfort zone, communicate clearly, and handle expectations more professionally.

Building teams taught me that creative talent is only one part of running a business. Reliability, commitment, communication, and trust matter just as much.

Shikhte Chaw taught me that a promising idea still needs resources, the right partners, and consistent execution.

China Link BD taught me that pursuing too many opportunities at once can divide my attention and prevent me from giving important work the focus it deserves.

ShortSwift Studio has taught me to think beyond individual execution and focus more on strategy, team structure, business development, and sustainable growth.

My entrepreneurial journey has also made me more aware of the areas I still need to improve. I want to deepen my technical knowledge, manage my time better, focus on fewer priorities, and become more consistent at finishing ambitious projects.

I do not want to hide those weaknesses. They are part of my current development.

My definition of success has evolved. At first, earning money and proving my skills were major priorities. Now, I increasingly care about building sustainable businesses, creating meaningful products, improving myself, and contributing something that lasts.

If I could give advice to my 16-year-old self, I would say to start earlier, stop overthinking, take risks, and stop waiting until everything feels perfectly planned.

My message to young freelancers and founders is:

“You don't need to be perfect or have everything figured out to start. Keep learning, take responsibility for your mistakes, and build something meaningful one step at a time.”

16. My Future Goals

Over the next one to three years, I want to scale ShortSwift Studio, complete meaningful technology and AI-related projects, publish my first research paper, continue growing academically and professionally, and develop the student-learning initiative.

I also want to improve my ability to focus, prioritize, and finish the things I begin.

Professionally, I want to work with ambitious businesses, startups, creators, and established brands, particularly in creative industries, technology, e-commerce, and AI.

International growth is an important part of my ambitions, particularly in the United States, the Middle East, and other markets.

My long-term dream is to build a unicorn company. I understand that this requires much more than ambition: it requires execution, sustainable business models, capable teams, valuable products, and the ability to solve meaningful problems at scale.

I want my personal brand to document this journey honestly as it develops, rather than pretending the destination has already been reached.

17. The Vision for TowsifKhan.com

TowsifKhan.com should be much more than a résumé, a generic portfolio, or a conventional personal website.

It should be the central place where people can understand who I am, what I believe, what I have built, what I am learning, what I am working on, and what I want to accomplish.

My primary identity across the website should be Creative Strategist. Entrepreneurship, creative direction, technology, and education should support that identity without making the overall positioning confusing.

The visual direction should combine editorial artistry, futuristic technology, and personal storytelling. I admire the creative quality and direction associated with my own agency website https://shortswift-studios-web.vercel.app/

Every part of the design should feel intentional.

The website should use sophisticated typography, distinctive layouts, purposeful animation, interactive project displays, and a strong visual narrative. Scroll-based animations and micro-interactions should support the story rather than distract from it.

The site should feel premium, original, creative, and technically polished on both mobile and desktop. A professional, natural portrait should be used if suitable assets are available.

18. Contact Details and Public Profiles

Public email: shortswiftstudios23@gmail.com

Meeting booking: https://calendly.com/shortswiftstudios23/30min

This booking link is currently associated with ShortSwift Studio and is used for 30-minute meetings. The website should make it clear what visitors are booking and should not imply that a separate personal booking system exists unless one is created.

Instagram: https://www.instagram.com/towsif.khan.02/

Facebook: https://www.facebook.com/towsif.khan.218701/

Additional social links have not yet been supplied, so none should be invented.

The contact form should accommodate different kinds of inquiries, including client projects, business partnerships, employment, speaking opportunities, mentoring or learning-related inquiries, and other messages.

The website should distinguish personal inquiries from agency inquiries where useful, without making the contact process unnecessarily complicated.

19. Privacy, Confidentiality, and Accuracy Rules

The website must protect private information and distinguish confirmed achievements from estimates, plans, and ambitions.

Do not publish:

- Approximate freelance earnings or private client values.
- Details about family property or wealth.
- The confidential subject of my XR research.
- Names or identifying information from the cheque incident.
- Invitations to events as a chief guest.
- Creator names I cannot reliably recall.
- Unverified awards, certificates, press coverage, testimonials, or achievements.

The Bangladesh Navy may be named as a client, but specific project details and confidential deliverables must remain private.

Do not claim that Shikhte Chaw launched. It failed before launch.

Do not claim that China Link BD never operated commercially. It had real sourcing, selling, and customer activity before becoming inactive.

Do not call Solexa inactive unless its current status is confirmed.

Do not present ShortSwift Server Architect or ShortSwift Course Bot as fully operational unless their live functionality has been verified.

Do not claim the lead-generation software has generated revenue or booked meetings without evidence.

Do not portray me as a senior software engineer. Present me as a computer science student and aspiring technology entrepreneur who is learning through building.

Do not imply that I own Hengyuda International Trade Co., Ltd. Do not imply affiliation with Nike, Puma, or New Balance.

Do not guarantee that students will earn money from my learning initiative. Explain the commitment, practical application, and growth philosophy without promising financial outcomes.

Do not invent project deliverables, business metrics, client permissions, student results, or technical features.

Whenever a fact is uncertain, either qualify it or leave it out until it can be verified.

20. Entrepreneurial Timeline

The following timeline should form the basis of the website's visual timeline. Exact dates should be used only where they have been confirmed.

Childhood: I dreamed of becoming a pilot, later became interested in AR/VR and IT, and developed an interest in building something of my own.

Around 2016: I learned about freelancing and began developing graphic design skills through YouTube, independent study, and practice.

9 November 2020: I started TSY EditX with Simi and Yeamin.

14 January 2022: I founded ShortSwift Studio.

Early 2023: I began working on Shikhte Chaw, an educational platform concept that ultimately failed before launch.

January 2025: I started Solexa, a premium sneaker brand for Bangladesh.

March 2025: I began a six-month Chinese-language program at Chongqing Jiaotong University.

24 May 2025: I started China Link BD, a China–Bangladesh trade venture.

July or August 2025: China Link BD became inactive as I prioritized ShortSwift Studio.

September 2025: I began my BSc in Computer Science and Technology.

2025 onward: I continued developing web projects, experimenting with software, and exploring automation and AI-assisted development.

Current direction: I am developing technology projects and working toward a learning initiative for a small group of dedicated students who want to learn, implement strategies, and grow alongside me.

Target before 2028: Publish my first research paper related to XR, subject to completion and publication.

Expected September 2029: Complete my BSc in Computer Science and Technology.

21. The Central Message of My Personal Brand

The central theme of TowsifKhan.com should be a story of independent growth, continuous learning, creative problem-solving, and building with purpose.

I started learning skills at a young age, worked toward earning independently, experienced the challenges of teamwork and entrepreneurship, built a creative agency, explored different business opportunities, moved to China to study computer science, and began developing software and new educational ideas.

Not every venture succeeded. Not every project is finished. I still have a great deal to learn.

But that is precisely why the story matters.

I want to build businesses, develop useful technology, create meaningful work, and help other people grow through the lessons I learn along the way.

My ambition is not simply to become successful on my own. Through my work and the learning system I am developing, I want to create opportunities for other committed people to improve their skills, apply what they learn, and build better futures for themselves.

The proposed editorial theme for the website is:

“Build independently. Learn relentlessly. Create with purpose. Be honest about the journey.”

This is a suggested theme for the website, not a quote from a published source.

The final website should tell my story with confidence but without exaggeration, ambition without false promises, and creativity without losing sight of the real person behind the work.
